WORK EXPERIENCE

Front End Developer

Vass (Project for Telefonica Tech)

04/2021 - Present

Madrid, Spain

Skills: React, Vanilla Javascript, Redux, Redux Saga, great research.

Logros/Funciones

- Migrating a proprietary Javascript framework (based in Pug and JQuery) to ReactJS.
- Created new features for the React application and made sure this features worked even if the old version of the website is the one that sent the data.
- Collaboration with the Back end and understanding for the transitions of the API to more modern technologies that worked better with ReactJS.

Software Developer

Utopic

01/2019 - Present

Tech Stack: Vanilla JavaScript, React, NodeJs / Express, Firebase

Achievements/Tasks

- Created a Front-End in React that handles custom forms for creating different types of users with different privileges from admins to door admission people to the final user. Using react-query for all the queries to the servers because of the great convenience and performance.
- Created a Back-End this node/express server also handles the authentication for different privileged account holders for the front end and handles validation and the processing of data.
- I intended this server to be modular so in the case that if we had to change database provider it wouldn't be so traumatic. Segmentation into Micro-services in the future would be ideal.
- Made new functionalities like: Multi Factor Authentication, Geo location services, data visualization.

Personal Projects

ww.leito.dev

This is my personal webpage. I use it for experimenting and posting some portfolio projects.

Achievements/Tasks

- Created different web applications for handling request to servers and handle different data using different state API's like: Context API and React-Query, I have also learned Redux but I haven't implemented it in personal projects.
- Currently creating the desktop graphical user interface for the Monero to Bitcoin Atomic Swap project. Using tools such Tauri and Svelte for the front end design and interactions with the desktop API.

EDUCATION

Secure Software Development Fundamentals

The Linux Foundation

11/2021 - 02/2022
